Skills & Expertise

- Python | JavaScript | Flask | React | Svelte | SQL | Django | PostgreSQL | Git
- Tensorflow | Keras | Scikit-Learn | Numpy | Pandas | Matplotlib | NLTK | Selenium
- Machine Learning | Deep Learning | Data Loading & Preprocessing | Data Analysis & Visualization | Natural Language Processing | Computer Vision | Data Collection | Data Structures & Algorithms | Client & Server-Side Web Dev

Education

Bachelor of Science

Polytechnic University of the Philippines

Major in Computer Science

Aug 2019 - Mar 2025

Experience

X++ Developer Intern

Creative Dynamix Solutions, Inc.

Developed and queried data reports using X++ that visualized the trend in client Rockwell Land Corporation's sales

Sep 2022 - Oct 2022

AI/ML Subject Matter Expert

Google Developer Student Clubs PUP

Mentored and guided GDSC-PUPs AI/ML department as subject matter/domain expert
Developed learning roadmap to be used by junior AI/ML cadets
Authored technical articles for department members to learn AI/ML concepts

Oct 2023 - Oct 2024

Full Stack Web Developer

LMC Engineering Front

Developed initial client-side and server-side architecture of our engineering consultancy business firm

Nov 2023 - Dec 2023

Data Engineer Intern

Virtuals Protocol

Cleaned, preprocessed, and ingested data for RAG AI agents.
Developed and wrote shell scripts that automated data ingestion processes of RAG AI agents
Led a small team of Data Engineers to automate the process of pulling raw datasets from company page uploaded by users for later data preprocessing and ingestion

Dec 2024 - Dec 2024

Customer Support

Dec 2024 - Jan 2025

Troubleshoot automatic HTTP request of agent to X/twitter API endpoints problem cases faced by clients building RAG Agents
Developed and authored guides for clients/builders how to create their own custom functionalities for their respective agent i.e. automatic image generation using OPEN AI API, posting tweets on X using X API, etc. increasing dynamicity of agent interaction with X users to increase its market capital

Projects

- auto-job-app-sender:** A multi-modal application that allows users to generate cover letters, extract LinkedIn connections, extract LinkedIn connections details, and send letters of inquiry en masse to multiple companies. Used NLP word embedding as a technique to classify recruiters gender based on name. (Selenium, Tensorflow, Pandas)

Dec 2023 - Jan 2025
- eda-denoiser-stress-detector:** A full fledged AI/ML web app that utilized a hybrid deep learning and machine learning model LSTM-SVM to denoise (remove artifacts from) electrodermal activity signals and subsequently detect points of stressful situations in the signals of an individual (React.js, Flask, Scikit-Learn, Tensorflow)

Mar 2024 - Dec 2024
- micro-organism-classifier:** A full stack web app that utilizes the use of the InceptionV3 CNN architecture to classify different micro-organisms. (React.js, Flask, Tensorflow)

Jan 2024 - Jan 2024
- depressive-sentiment-analyzer:** A full stack web application that analyzes depressive or non-depressive messages using the depressive sentiment dataset from Reddit using boosting techniques. (React.js, Flask, Scikit-Learn)

Jan 2024 - Jan 2024
- gen-philo-text:** A generative model that creates novel sequences of philosophical text based on writings about Jungian psychology, Biblical philosophy, and the lot. (React.js, Flask, Tensorflow)

Dec 2023 - Jan 2024
- project-alexander:** A portfolio website compiling all my machine learning and deep learning projects. (Svelte.js, Flask, Leonardo.AI)

Oct 2023 - Nov 2023
- phil-jurisprudence-recsys:** Second phase of my 1st attempted undergraduate thesis that implements a recommendation system for Philippine jurisprudence documents to litigation professionals and experts. (Tensorflow, Numpy, Matplotlib, Pandas, Scikit-Learn)

Oct 2022 - Jun 2023
- LaRJ-Corpus:** The first phase of my 1st attempted undergraduate thesis that curated an experimental dataset of Labor Related Jurisprudence Corpora of the Philippine Justice System for legal recommendation systems using OpenAI's GPT-3.5 API. (Selenium, BeautifulSoup, Pandas)

Oct 2022 - Jun 2023
- hate-speech-classifier:** An implementation and comparison of the Softmax Regression and Bidirectional LSTM algorithms that identified and detected online hate speech & rhetoric in the internet using the Reddit & Twitter hate speech datasets. (Tensorflow, Numpy, Matplotlib, Pandas, ScikitLearn)

Jan 2023 - May 2023

Achievements & Certifications

Polytechnic University of the Philippines

1st year 2nd semester of Bachelors in Computer Science Program

Mar 2019

Stanford Online

Supervised Machine Learning: Regression and Classification

Jan 2023 - Aug 2023

DeepLearning.AI

Deep Learning Specialization by Andrew Ng

Feb 2023 - Jul 2023
