Larry Miguel R. Cueva

MichaelAveuc571@gmail.com

(+63) 970-745-1021 | github.com/08Aristodemus24

https://project-alexander.vercel.app/

Skills & Expertise

- Python | SQL | NoSQL | Linux | Docker | Git | Flask | JavaScript | React
- Apache-Airflow | Snowflake | AWS S3 | Apache-Spark | Selenium | Pandas | MongoDB | Tensorflow | Scikit-Learn | Matplotlib
- Data Extraction, Transformation, and Loading | Data Warehousing | Data Pipelines | Containerization | Machine Learning | Data Analysis & Visualization | Data Structures & Algorithms | Client & Server-Side Web Dev

Education

Bachelor of Science

Polytechnic University of the Philippines

• Major in Computer Science

Aug 2019 - Mar 2025

<u>Experience</u>

X++ Developer Intern

Creative Dynamix Solutions, Inc.

Sep 2022 - Oct 2022

• Developed and queried data reports using X++ that visualized the trend in client Rockwell Land Corporation's sales

AI/ML Subject Matter Expert

Google Developer Student Clubs PUP

Oct 2023 - Oct 2024

- Mentored and guided GDSC-PUPs AI/ML department as subject matter/domain expert
- Developed learning roadmap to be used by junior AI/ML cadets
- Authored technical articles for department members to learn AI/ML concepts

Full Stack Web Developer

LMC Engineering Front

Nov 2023 - Dec 2023

• Developed initial client-side and server-side architecture of our engineering consultancy business firm

Data Engineer Intern

Virtuals Protocol

Dec 2024 - Dec 2024

- Cleaned, preprocessed, and ingested data for RAG AI agents.
- Developed and wrote shell scripts that automated data ingestion processes of RAG AI agents
- Led a small team of Data Engineers to automate the process of pulling raw datasets from company page uploaded by users for later data preprocessing and ingestion

Customer Support

Dec 2024 - Jan 2025

- Troubleshot automatic HTTP request of agent to X/twitter API endpoints problem cases faced by clients building RAG Agents
- Developed and authored guides for clients/builders how to create their own custom functionalities for their respective agent i.e. automatic image generation using OPEN AI API, posting tweets on X using X API, etc. increasing dynamicity of agent interaction with X users to increase its market capital

Projects

• usd-php-ml-pipeline: A data pipeline that scrapes forex market from the Polygon API on the US dollar to Philippine Peso that is transformed to accommodate signal processing ML tasks and models seamlessly, by engineering features of prices for 1 day intervals of the market. (Airflow, AWS S3, Apache-Spark, AWS SageMaker, Docker)

Dec 2024 - Feb 2025

auto-job-app-sender: A multi-modal application that allows users to generate cover letters, extract LinkedIn connections, extract LinkedIn connections details, and send letters of inquiry en masse to multiple companies. Used NLP word embedding as a technique to classify recruiters gender based on name. (Selenium, Tensorflow, Pandas)

Dec 2023 - Jan 2025

eda-denoiser-stress-detector: A full fledged AI/ML web app that utilized a hybrid deep learning and machine learning model LSTM-SVM to denoise (remove artifacts from) electrodermal activity signals and subsequently detect points of stressful situations in the signals of an individual (React.js, Flask, Scikit-Learn, Tensorflow)

Mar 2024 - Dec 2024

LaRJ-Corpus: The first phase of my 1st attempted undergraduate thesis that curated an experimental dataset of Labor Related Jurisprudence Corpora of the Philippine Justice System for legal recommendation systems using OpenAI's GPT-3.5 API. (Selenium, BeautifulSoup, Pandas)

Oct 2022 - Jun 2023

depressive-sentiment-analyzer: A full stack web application that analyzes depressive or nondepressive messages using the depressive sentiment dataset from Reddit using boosting techniques. (React.js, Flask, Scikit-Learn)

Jan 2024 - Jan 2024

project-alexander: A portfolio website compiling all my machine learning and deep learning projects. (Svelte.js, Flask, Leonardo.AI)

Oct 2022 - Jun 2023

Oct 2023 - Nov 2023

phil-jurisprudence-recsys: Second phase of my 1st attempted undergraduate thesis that implements a recommendation system for Philippine jurisprudence documents to litigation professionals and experts. (Tensorflow, Numpy, Matplotlib, Pandas, Scikit-Learn)

hate-speech-classifier: An implementation and comparison of the Softmax Regression and Bidirectional LSTM algorithms that identified and detected online hate speech & rhetoric in the internet using the Reddit & Twitter hate speech datasets. (Tensorflow, ScikitLearn, Numpy)

Jan 2023 - May 2023

Achievements & Certifications

Polytechnic University of the Philippines

1st year 2nd semester of Bachelors in Computer Science Program

Mar 2019

Stanford Online

• Supervised Machine Learning: Regression and Classification

Jan 2023 - Aug 2023

DeepLearning.AI

Deep Learning Specialization by Andrew Ng

Feb 2023 - Jul 2023
